Namespace Documentation

Package WebForm

Classes

- class **GetChart**

*Summary description for **GetChart**.*

Class Documentation

_Default Class Reference

Inheritance diagram for _Default:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **back_Click** (object sender, ImageClickEventArgs e)
- void **next_Click** (object sender, ImageClickEventArgs e)
- void **txtpage_TextChanged** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file Default.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/Default.aspx.cs

admincompose Class Reference

Inheritance diagram for admincompose:

Static Public Member Functions

- static object **SendMailToUser** (object[] args)

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnSend_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file admincompose.aspx.cs.

Member Function Documentation

void admincompose.btnSend_Click (object sender, EventArgs e) [protected]

[Send] Send messages and redirect inbox.if no success -> notification sent error

Definition at line 55 of file admincompose.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/admincompose.aspx.cs

adminhelp Class Reference

Inheritance diagram for adminhelp:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file adminhelp.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminhelp.aspx.cs

admininbox Class Reference

Inheritance diagram for admininbox:

Static Public Member Functions

- static object **ReadMessage** (int id)
- static object **DeleteMessage** (object args)

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btndelete_Click** (object sender, EventArgs e)
- void **LinkButton2_Click** (object sender, EventArgs e)
- void **lbPre_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file admininbox.aspx.cs.

Member Function Documentation

void admininbox.btndelete_Click (object sender, EventArgs e) [protected]

[Delete] delete message checked.

Definition at line 55 of file admininbox.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/admininbox.aspx.cs

adminmyaccount Class Reference

Inheritance diagram for adminmyaccount:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btncedit_Click** (object sender, EventArgs e)
- void **btncsave_Click** (object sender, EventArgs e)
- void **btncancel_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file adminmyaccount.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminmyaccount.aspx.cs

adminpaybill_detail Class Reference

Inheritance diagram for adminpaybill_detail:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **chkPaybill_CheckedChanged** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file adminpaybill_detail.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminpaybill_detail.aspx.cs

adminreportstatistics Class Reference

Inheritance diagram for adminreportstatistics:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 8 of file adminreportstatistics.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminreportstatistics.aspx.cs

adminsentsentmessages Class Reference

Inheritance diagram for adminsentsentmessages:

Static Public Member Functions

- static object **ReadMessage** (int id)
- static object **DeleteMessage** (object args)
- static object **EmptyTrashService** (object args)

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btndelete_Click** (object sender, EventArgs e)
- void **LinkButton2_Click** (object sender, EventArgs e)
- void **lbPre_Click** (object sender, EventArgs e)
- void **btnEmpty_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file adminsentsentmessages.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminsentsentmessages.aspx.cs

adminsitemap Class Reference

Inheritance diagram for adminsitemap:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file adminsitemap.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminsitemap.aspx.cs

adminsynclogs Class Reference

Inheritance diagram for adminsynclogs:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file adminsynclogs.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminsynclogs.aspx.cs

admintrash Class Reference

Inheritance diagram for admintrash:

Static Public Member Functions

- static object **ReadMessage** (int id)
- static object **DeleteMessage** (object args)
- static object **EmptyTrashService** (object args)

Public Attributes

- string **Ids** = ""

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnDelete_Click** (object sender, EventArgs e)
- void **LinkButton2_Click** (object sender, EventArgs e)
- void **lbPre_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file admintrash.aspx.cs.

Member Function Documentation

void admintrash.btnDelete_Click (object sender, EventArgs e) [protected]

[Delete] delete message trash.

Definition at line 89 of file admintrash.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/admintrash.aspx.cs

adminusermanagement Class Reference

Inheritance diagram for adminusermanagement:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnactive_Click** (object sender, EventArgs e)
- void **btndeactive_Click** (object sender, EventArgs e)
- void **grdusermanagement_PageIndexChanging** (object sender, GridViewPageEventArgs e)
- void **btnfilter_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file adminusermanagement.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminusermanagement.aspx.cs

Inheritance diagram for `adminusermanagement` details:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btndeditoverview_Click** (object sender, EventArgs e)
- void **btncsaveoverview_Click** (object sender, EventArgs e)
- void **btncanceloverview_Click** (object sender, EventArgs e)
- void **btndeditprofile_Click** (object sender, EventArgs e)
- void **btncsaveprofile_Click** (object sender, EventArgs e)
- void **btncancelprofile_Click** (object sender, EventArgs e)
- void **btncsavepreferences_Click** (object sender, EventArgs e)
- void **ddlcountry_SelectedIndexChanged** (object sender, EventArgs e)
- void **btncsavebill_Click** (object sender, EventArgs e)
- void **btncaddbill_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file adminusermanagement_details.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminusermanagement_details.aspx.cs

adminwebadminlogs Class Reference

Inheritance diagram for adminwebadminlogs:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnfilter_Click** (object sender, EventArgs e)
- void **grdlogs_PageIndexChanging** (object sender, GridViewPageEventArgs e)

Detailed Description

Definition at line 9 of file adminwebadminlogs.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/adminwebadminlogs.aspx.cs

BaseServ Class Reference

initialize the connection string to sql server
Inheritance diagram for BaseServ:

Static Protected Attributes

- static string `dbConnString`
-

Detailed Description

initialize the connection string to sql server
Definition at line 16 of file BaseServ.cs.

The documentation for this class was generated from the following file:

- `~/Source/SmartHomeCare/App_Code/BaseServ.cs`

BaseView Class Reference

data processing , display on website

Static Public Member Functions

- static void **SelectedTreeView** (TreeView tree, int parentnodeindex, int nodeindex=-1)
- static void **BindDataToDropDownList** (DropDownList list, DataTable data, bool hasNone=true)
- static void **AddBlankDropDownItem** (DropDownList list, string value="")
- static void **AddBlankDropDownItem** (DropDownList list, string text, string value)
- static void **BindDataToListBox** (ListBox list, DataTable data)
- static void **SelectDropDownItem** (DropDownList list, object obj)
- static void **SelectDropDownItem** (DropDownList list, string obj)
- static bool **SelectDropDownItem** (DropDownList list, object obj, object enable)
- static bool **CheckImageFileType** (string fileName)
- static string **Html2Text** (string value)
- static string **Text2Html** (string value)
- static object **GetFieldValue** (DataRowView row, string FieldName)
- static string **GetStringFieldValue** (DataRowView row, string FieldName)
- static int **GetIntFieldValue** (DataRowView row, string FieldName)
- static float **GetFloatFieldValue** (DataRowView row, string FieldName)
- static bool **GetBooleanFieldValue** (DataRowView row, string FieldName)
- static DateTime **GetDateTimeFieldValue** (DataRowView row, string FieldName)
- static object **GetFieldValue** (DataRow row, string FieldName)
- static string **GetStringFieldValue** (DataRow row, string FieldName)
- static int **GetIntFieldValue** (DataRow row, string FieldName)
- static float **GetFloatFieldValue** (DataRow row, string FieldName)
- static bool **GetBooleanFieldValue** (DataRow row, string FieldName)
- static DateTime **GetDateTimeFieldValue** (DataRow row, string FieldName)

Detailed Description

data processing , display on website

Definition at line 17 of file BaseView.cs.

Member Function Documentation

static void BaseView.AddBlankDropDownItem (DropDownList *list*, string *value* = "") [static]

add 1 row to dropdownlist

See Also:

AddBlankDropDownItem()

Parameters:

<i>list</i>	control dropDownList of C#
<i>value</i>	is dropdownlist

Definition at line 101 of file BaseView.cs.

static void BaseView.AddBlankDropdownItem (DropDownList *list*, string *text*, string *value*)[static]

add 1 row to dropdownlist

See Also:

AddBlankDropdownItem()

Parameters:

<i>list</i>	control dropDownList of C#
<i>text</i>	is dropdownlist
<i>value</i>	is dropdownlist

Definition at line 116 of file BaseView.cs.

static void BaseView.BindDataToDropDownList (DropDownList *list*, DataTable *data*, bool *hasNone* = true)[static]

bind data to dropdownlist

See Also:

BindDataToDropDownList()

Parameters:

<i>list</i>	control dropDownList of C#
<i>data</i>	dataTable is source of dropdownlist
<i>hasNone</i>	object(value: true or false) true: add dropdownlist 1 row none,false no add

Definition at line 85 of file BaseView.cs.

static void BaseView.BindDataToListBox (ListBox *list*, DataTable *data*)[static]

bind data to listbox

See Also:

BindDataToListBox()

Parameters:

<i>list</i>	control ListBox of C#
<i>data</i>	dataTable is source of ListBox

Definition at line 130 of file BaseView.cs.

static bool BaseView.CheckImageFileType (string *fileName*)[static]

check file is image

See Also:

CheckImageFileType()

Parameters:

<i>fileName</i>	is name image
-----------------	---------------

Definition at line 184 of file BaseView.cs.

static object BaseView.GetFieldValue (DataRowView *row*, string *FieldName*)[static]

get value in datarow with column name

Parameters:

<i>row</i>	is datarow or datarowview
<i>FieldName</i>	column name

Definition at line 231 of file BaseView.cs.

static string BaseView.Html2Text (string *value*) [static]

convert text content from format html to text

See Also:

Html2Text()

Parameters:

<i>value</i>	is text content
--------------	-----------------

Definition at line 211 of file BaseView.cs.

static void BaseView.SelectDropdownItem (DropDownList *list*, object *obj*) [static]

selected item of dropdownlist = object input

See Also:

SelectDropdownItem()

Parameters:

<i>list</i>	control DropDownList of C#
<i>obj</i>	is value input

Definition at line 141 of file BaseView.cs.

static void BaseView.SelectDropdownItem (DropDownList *list*, string *obj*) [static]

selected item of dropdownlist = object input

See Also:

SelectDropdownItem()

Parameters:

<i>list</i>	control DropDownList of C#
<i>obj</i>	is value input

Definition at line 157 of file BaseView.cs.

static bool BaseView.SelectDropdownItem (DropDownList *list*, object *obj*, object *enable*) [static]

selected item of dropdownlist = object input

See Also:

SelectDropdownItem()

Parameters:

<i>list</i>	control DropDownList of C#
<i>obj</i>	is value input

Definition at line 173 of file BaseView.cs.

static void BaseView.SelectedTreeView (TreeView *tree*, int *parentnodeindex*, int *nodeindex* = -1) [static]

select index event handler directory tree (left menu)

See Also:

SelectedTreeView()

Parameters:

<i>tree</i>	control treeview of C#
-------------	------------------------

<i>parentnodeindex</i>	node parent of node selected
<i>nodeindex</i>	node selected

Definition at line 59 of file BaseView.cs.

static string BaseView.Text2Html (string *value*) [static]

convert text content from format text to html

See Also:

Text2Html()

Parameters:

<i>value</i>	is text content
--------------	-----------------

Definition at line 220 of file BaseView.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/BaseView.cs

CaptchaImage Class Reference

captcha processing

Public Member Functions

- **CaptchaImage** (string *s*, int *width*, int *height*)
- **CaptchaImage** (string *s*, int *width*, int *height*, string *familyName*)
- void **Dispose** ()

Protected Member Functions

- virtual void **Dispose** (bool *disposing*)

Properties

- string **Text** [get]
- Bitmap **Image** [get]
- int **Width** [get]
- int **Height** [get]

Detailed Description

captcha processing

Definition at line 10 of file CaptchaImage.cs.

Constructor & Destructor Documentation

CaptchaImage.CaptchaImage (string *s*, int *width*, int *height*)

Initializes a new instance of the **CaptchaImage** class using the specified text, width and height.

Definition at line 50 of file CaptchaImage.cs.

CaptchaImage.CaptchaImage (string *s*, int *width*, int *height*, string *familyName*)

Initializes a new instance of the **CaptchaImage** class using the specified text, width, height and font family.

Definition at line 61 of file CaptchaImage.cs.

Member Function Documentation

void CaptchaImage.Dispose ()

Releases all resources used by this object.

Definition at line 80 of file CaptchaImage.cs.

virtual void CaptchaImage.Dispose (bool *disposing*) [protected], [virtual]

Custom Dispose method to clean up unmanaged resources.

Dispose of the bitmap.

Definition at line 89 of file CaptchaImage.cs.

Property Documentation

string CaptchaImage.Text [get]

Public properties (all read-only).

Definition at line 16 of file CaptchaImage.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/CaptchaImage.cs

DataService Class Reference

Summary description for **DataService**

Inheritance diagram for DataService:

Public Member Functions

- int **ChangePassword** (string username, string passcurrent, string passnew, string passhint)
- int **Delete_UsersAuthorizes_ById** (int autoid)
- int **InsertUpdate_Users** (string username, string userpass, string passhint, int usertypeid, bool isactive)
- int **InsertUpdate_UsersContact** (string username, string name, string email, string phone, string address, bool IsMain)
- int **InsertUpdate_UsersInfo** (string username, string firstname, string lastname, DateTime?dateofbirth, bool isgender, string emailaddress, string streetaddress, string citycode, string statecode, string zipcode, string county, string countrycode, string homephone, string mobilephone, string registrationcode)
- XmlDocument **GetInfo_UsersAll_ByUserName** (string username)
- XmlDocument **GetList_MemberType** ()
- XmlDocument **GetInfo_Rule_ByUserName** (string username)
- XmlDocument **GetList_BillingAccountTypes** ()
- XmlDocument **GetInfo_UsersContact_ByUserName** (string username)
- XmlDocument **GetList_AuthorizedUser** (string username)
- XmlDocument **GetList_Countries** ()
- XmlDocument **GetList_CountryStates** ()
- XmlDocument **GetList_CreditCardType** ()
- XmlDocument **GetList_CountryStates_ByCountryCode** (string countrycode)
- XmlDocument **Insert_UsersAuthorizes** (string username, string authorizeduser)
- XmlDocument **Login_Website** (string username, string userpass, string loginfromcomputerip)
- XmlDocument **Register_Account_Users** (string username, string userpass, string passhint, string firstname, string lastname, DateTime?dateofbirth, bool isgender, string emailaddress, string streetaddress, string citycode, string statecode, string zipcode, string county, string countrycode, string homephone, string mobilephone, string registeredip, string registrationcode)
- object **Register_Validation_UserName** (string username)
- object **IsExists_Email** (string email)
- XmlDocument **Submit_Forgot_Password** (string username, DateTime?dateofbirth)
- XmlDocument **Submit_Forgot_UserName** (string firstname, string lastname, DateTime?dateofbirth, string zipcode)
- XmlDocument **GetList_Paramaters** (int Id, string ParaCode, string Description)
- XmlDocument **GetList_AdminMessages** (int Id, string Code, string Title)
- int **InsertUpdate_AdminMessages** (int Id, string Code, string Title, string TitleVN, bool Approved, string Note)
- XmlDocument **GetList_Users_Admin** (string UserName, string LastName, string FirstName, DateTime?FromDateOfBirth, DateTime?ToDateOfBirth)
- XmlDocument **GetList_Users** (int userid, string username, bool?isactive, string email, DateTime?createdatefrom, DateTime?createdateto)

- XmlDocument **GetList_RegisterCodes** (string Rule, bool?IsUsing, bool?Disable)
- XmlDocument **GetList_User_Login** (string Username, DateTime?LoginDateFrom, DateTime?LogindDateTo)
- int **IsActive_User_ByIds** (string Ids, bool isActive)
- int **InsertUpdate_Paramaters** (int Id, string ParamCode, string Description, string Value, bool Active, string Note)
- int **DeleteParamaters** (int AutoId)
- int **Set_RegisterCode_Using** (string Code)
- XmlDocument **Insert_MessageCenter** (string MailFrom, string Subject, string MailTo, string MessageCenter)
- XmlDocument **Delete_MessageCenter_ByIds** (string MessageIds)
- XmlDocument **Delete_MessageCenter_Trash_ByIds** (string MessageIds)
- XmlDocument **GetInfo_PayBill_CreditCard** (string username)
- XmlDocument **GetInfo_BillingAccounts** (string username)
- XmlDocument **GetInfo_BillingAccounts_User** (string username)
- XmlDocument **GetList_BillingAccountDetails** (string AccountNumber)
- XmlDocument **GetList_BillingPayments** (string AccountNumber)
- XmlDocument **GetList_MessageCenter_Inbox** (string UserName)
- XmlDocument **GetList_MessageCenter_Alarm** (string UserName)
- XmlDocument **GetList_MessageCenter_Sent** (string UserName)
- XmlDocument **GetList_MessageCenter_Trash** (string UserName)
- XmlDocument **GetInfo_MessageCenter_ById** (int MessageId)
- object **GetEmail_ByUserName** (string UserName)
- int **UpdateGlobalSetting** (string UserName)
- XmlDocument **GetList_UserTemperature** (string UserName, DateTime?FromDate, DateTime?ToDate)
- int **InsertUpdate_UserSettingColor** (string UserName, int SkinTempColorId, int AmbTempColorId, int BackgroundColorId)
- int **Update_BillingAccount_Management** (string AccountNumber, int BillingTypeId, DateTime?EffDate, decimal AmountCharge, bool IsPayBill, string Notes)
- int **AddManual_BillingAccount_Management** (string AccountNumber, DateTime?Date, decimal AmountCharge, string Notes)
- XmlDocument **GetInfo_UserTrackMyHealth** (string UserName)
- XmlDocument **GetInfo_UserSettingColor** (string UserName)
- XmlDocument **GetInfo_UserTrackMyHealth_Measurement** (string UserName)
- int **InsertUpdate_UserTrackMyHealth_Measurement** (string UserName, bool Metric, bool US)
- int **InsertUpdate_UserTrackMyHealth_Threshold** (string UserName, decimal?Samplerate, int?SampleRateId, decimal?LowValue, decimal?HighValue, decimal?VeryHighValue)
- XmlDocument **GetList_UserTrackOthers** (string UserName)
- XmlDocument **GetInfo_UserAll_ByUserName** (string UserName)
- XmlDocument **GetInfo_BillingInfo_ById** (string PaymentId)
- XmlDocument **GetList_EmailTemplates** ()
- XmlDocument **GetInfo_EmailTemplates** (int Id)
- int **InsertUpdate_EmailTemplates** (int id, string code, string subject, string body, string note)

Summary description for **DataService**

Definition at line 16 of file DataService.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/DataService.cs

DBClass Class Reference

select, insert, update, delete database sql server

Inheritance diagram for DBClass:

Public Member Functions

- virtual object **ExecuteScalar** (string ProcedureName, params object[] Parameters)
- virtual int **ExecuteNonQuery** (string ProcedureName, params object[] Parameters)
- virtual DataRow **GetDataRow** (string ProcedureName, params object[] Parameters)
- virtual DataRow **GetDataRow** (int RowIndex, string ProcedureName, params object[] Parameters)
- object **GetValueFromDB** (string sql)
- int **ChangePassword** (string username, string passcurrent, string passnew, string passhint)
- int **Delete_UsersAuthorizes_ById** (int autoid)
- int **InsertUpdate_Users** (string username, string userpass, string passhint, int usertypeid, bool isactive)
- int **InsertUpdate_UsersContact** (string username, string name, string email, string phone, string address, bool IsMain)
- int **InsertUpdate_UsersInfo** (string username, string firstname, string lastname, DateTime?dateofbirth, bool isgender, string emailaddress, string streetaddress, string citycode, string statecode, string zipcode, string county, string countrycode, string homephone, string mobilephone, string registrationcode)
- DataRow **GetInfo_UsersAll_ByUserName** (string username)
- DataTable **GetList_MemberType** ()
- DataRow **GetInfo_Rule_ByUserName** (string username)
- DataTable **GetList_BillingAccountTypes** ()
- DataRow **GetInfo_UsersContact_ByUserName** (string username)
- DataSet **GetList_AuthorizedUser** (string username)
- DataSet **GetList_Countries** ()
- DataSet **GetList_CountryStates** ()
- DataSet **GetList_CreditCardType** ()
- DataSet **GetList_CountryStates_ByCountryCode** (string countrycode)
- DataRow **Insert_UsersAuthorizes** (string username, string authorizeduser)
- DataRow **Login_Website** (string username, string userpass, string loginfromcomputerip)
- DataRow **Register_Account_Users** (string username, string userpass, string passhint, string firstname, string lastname, DateTime?dateofbirth, bool isgender, string emailaddress, string streetaddress, string citycode, string statecode, string zipcode, string county, string countrycode, string homephone, string mobilephone, string registeredip, string registrationcode)
- object **Register_Validation_UserName** (string username)
- object **IsExists_Email** (string email)
- DataRow **Submit_Forgot_Password** (string username, DateTime?dateofbirth)
- DataRow **Submit_Forgot_UserName** (string firstname, string lastname, DateTime?dateofbirth, string zipcode)
- DataSet **GetList_Paramaters** (int Id, string ParaCode, string Description)
- DataSet **GetList_AdminMessages** (int Id, string Code, string Title)
- int **InsertUpdate_AdminMessages** (int Id, string Code, string Title, string TitleVN, bool Approved, string Note)

- DataSet **GetList_Users_Admin** (string UserName, string LastName, string FirstName, DateTime?FromDateOfBirth, DateTime?ToDateOfBirth)
- DataTable **GetList_Users** (int userid, string username, bool?isactive, string email, DateTime?createdatefrom, DateTime?createdateto)
- DataTable **GetList_RegisterCodes** (string Rule, bool?IsUsing, bool?Disable)
- DataTable **GetList_User_Login** (string Username, DateTime?LoginDateFrom, DateTime?LogindDateTo)
- int **IsActive_User_ByIds** (string Ids, bool isActive)
- int **InsertUpdate_Paramaters** (int Id, string ParamCode, string Description, string Value, bool Active, string Note)
- int **DeleteParamaters** (int AutoId)
- int **Set_RegisterCode_Using** (string Code)
- DataRow **Insert_MessageCenter** (string MailFrom, string Subject, string MailTo, string MessageCenter)
- DataRow **Delete_MessageCenter_ByIds** (string MessageIds)
- DataRow **Delete_MessageCenter_Trash_ByIds** (string MessageIds)
- DataRow **GetInfo_PayBill_CreditCard** (string username)
- DataTable **GetInfo_BillingAccounts** (string username)

- static DataTable **GetDataTable** (string ProcedureName, params object[] Parameters)
- static DataSet **GetDataSet** (string ProcedureName, params object[] Parameters)
- static string **GetMessageByCode2** (string message_code)

Additional Inherited Members

Detailed Description

select, insert, update, delete database sql server

Definition at line 14 of file DBClass.cs.

Member Function Documentation

int DBClass.AddManual_BillingAccount_Management (string *AccountNumber*, DateTime? *Date*, decimal *AmountCharge*, string *Notes*)

add manual billing account

See Also:

AddManual_BillingAccount_Management()

Returns:

int value 1 success, 0 failure

Definition at line 641 of file DBClass.cs.

int DBClass.ChangePassword (string *username*, string *passcurrent*, string *passnew*, string *passhint*)

change password user

See Also:

ChangePassword()

Parameters:

<i>username</i>	need change password
<i>pascurrent</i>	password current
<i>passnew</i>	password new need change

Returns:

value 1 success, 0 failure

Definition at line 130 of file DBClass.cs.

string DBClass.Cornfirm_Delete ()

message box confirm delete

See Also:

Cornfirm_Delete()

Returns:

string value

Definition at line 930 of file DBClass.cs.

DataRow DBClass.Delete_MessageCenter_ByIds (string *MessageIds*)

delete message by array id

See Also:

Delete_MessageCenter_ByIds()

Returns:

datarow

Definition at line 476 of file DBClass.cs.

DataRow DBClass.Delete_MessageCenter_Trash_ByIds (string *MessageIds*)

delete message trash by array trash id

See Also:

Delete_MessageCenter_Trash_ByIds()

Returns:

datarow

Definition at line 485 of file DBClass.cs.

int DBClass.Delete_UsersAuthorizes_ById (int *autoid*)

delete user authorize by id

See Also:

Delete_UsersAuthorizes_ById()

Parameters:

<i>autoid</i>	id user authorize need delete
---------------	-------------------------------

Returns:

value 1 success, 0 failure

Definition at line 142 of file DBClass.cs.

int DBClass.DeleteParamaters (int *Autoid*)

delete parameter by id

See Also:

DeleteParamaters()

Returns:

int value 1 success, 0 failure

Definition at line 448 of file DBClass.cs.

string DBClass.Edit_Success ()

message box confirm edit

See Also:

Edit_Success()

Returns:

string value

Definition at line 939 of file DBClass.cs.

virtual int DBClass.ExecuteNonQuery (string *ProcedureName*, params object[] *Parameters*) [virtual]

execute procedure insert, update, delete

See Also:

ExecuteNonQuery()

Returns:

int

Definition at line 37 of file DBClass.cs.

virtual object DBClass.ExecuteScalar (string *ProcedureName*, params object[] *Parameters*) [virtual]

execute procedure insert, update, delete

See Also:

ExecuteScalar()

Returns:

object

Definition at line 28 of file DBClass.cs.

bool DBClass.Get_IsUS_UserTrackMyHealth_ByUserName (string *username*)

check user is US

See Also:

Get_IsUS_UserTrackMyHealth_ByUserName()

Returns:

bool value

Definition at line 903 of file DBClass.cs.

string DBClass.Get_RegistrationCode_Automatic ()

get string register code automatic

See Also:

Get_RegistrationCode_Automatic()

Returns:

string value

Definition at line 891 of file DBClass.cs.

string DBClass.Get_RegistrationCode_ByMemberType (string *membertype*)

get string code by membertype

See Also:

Get_RegistrationCode_ByMemberType()

Returns:

string value

Definition at line 879 of file DBClass.cs.

decimal DBClass.Get_TotalAmountDue_ByAccountNumber (string *AccountNumber*)

get total amount due by account number

See Also:

Get_TotalAmountDue_ByAccountNumber()

Returns:

decimal value

Definition at line 820 of file DBClass.cs.

int DBClass.GetCount_EmailAlarm_ByUserName (string *UserName*)

get total email alarm by username

See Also:

GetCount_EmailAlarm_ByUserName()

Returns:

int value

Definition at line 855 of file DBClass.cs.

int DBClass.GetCount_EmailNew_ByUserName (string *UserName*)

get total email new by username

See Also:

GetCount_EmailNew_ByUserName()

Returns:

int value

Definition at line 867 of file DBClass.cs.

int DBClass.GetCount_EmailSent_ByUserName (string *UserName*)

get total email send by username

See Also:

GetCount_EmailSent_ByUserName()

Returns:

int value

Definition at line 843 of file DBClass.cs.

int DBClass.GetCount_EmailTrash_ByUserName (string *UserName*)

get total email trash by username

See Also:

GetCount_EmailTrash_ByUserName()

Returns:

int value

Definition at line 831 of file DBClass.cs.

virtual DataRow DBClass.GetDataRow (string *ProcedureName*, params object[] *Parameters*) [virtual]

get data by procedure

See Also:

GetDataRow()

Returns:

DataRow

Definition at line 46 of file DBClass.cs.

virtual DataRow DBClass.GetDataRow (int *RowIndex*, string *ProcedureName*, params object[] *Parameters*) [virtual]

get datarow in datatable by rowindex

See Also:

GetDataRow()

Returns:

DataRow

Definition at line 55 of file DBClass.cs.

static DataSet DBClass.GetDataSet (string *ProcedureName*, params object[] *Parameters*) [static]

get dataset by procedure

See Also:

GetDataSet()

Returns:

DataSet

Definition at line 109 of file DBClass.cs.

static DataTable DBClass.GetDataTable (int *TableIndex*, string *ProcedureName*, params object[] *Parameters*) [static]

get datatable in dataset by tableindex

See Also:

GetDataTable()

Returns:

DataTable

Definition at line 75 of file DBClass.cs.

static DataTable DBClass.GetDataTable (string *ProcedureName*, params object[] *Parameters*) [static]

get datatable by procedure

See Also:

GetDataTable()

Returns:

DataTable

Definition at line 93 of file DBClass.cs.

object DBClass.GetEmail_ByUserName (string *UserName*)

get email by username

See Also:

GetEmail_ByUserName()

Returns:

object value is email

Definition at line 591 of file DBClass.cs.

DataTable DBClass.GetInfo_BillingAccounts (string *username*)

get info billing account

See Also:

GetInfo_PayBill_CreditCard()

Returns:

datatable

Definition at line 504 of file DBClass.cs.

DataRow DBClass.GetInfo_BillingAccounts_User (string *username*)

get info billing account user

See Also:

GetInfo_BillingAccounts_User()

Returns:

datarow

Definition at line 513 of file DBClass.cs.

DataTable DBClass.GetInfo_BillingInfo_ById (string *PaymentId*)

get info billing by payment id

See Also:

GetInfo_BillingInfo_ById()

Returns:

datatable

Definition at line 699 of file DBClass.cs.

DataRow DBClass.GetInfo_BodyMeasurement (string *username*)

get info body measurement by username

See Also:

GetInfo_BodyMeasurement()

Returns:

datatable

Definition at line 1094 of file DBClass.cs.

DataTable DBClass.GetInfo_BodyMeasurement_Graph (string *username*)

get info body measurement give graph

See Also:

GetInfo_BodyMeasurement_Graph()

Returns:

datatable

Definition at line 1121 of file DBClass.cs.

DataTable DBClass.GetInfo_EmailTemplates (int *Id*)

get info email templete

See Also:

GetInfo_EmailTemplates()

Returns:

datatable

Definition at line 719 of file DBClass.cs.

DataRow DBClass.GetInfo_Fertility (string *username*)

get info Fertility by username

See Also:

GetInfo_Fertility()

Returns:

datarow

Definition at line 1522 of file DBClass.cs.

DataRow DBClass.GetInfo_Fitness (string *username*)

get info fitness by username

See Also:

GetInfo_Fitness()

Returns:

datarow

Definition at line 1368 of file DBClass.cs.

DataTable DBClass.GetInfo_Fitness_HRExercise_Program_ByFitnessHRProgramId (int *fitnessHRProgramId*)

get info fitness hrexercise program by fitness program id

See Also:

GetInfo_Fitness_HRExercise_Program_ByFitnessHRProgramId()

Returns:

datatable

Definition at line 1423 of file DBClass.cs.

DataRow DBClass.GetInfo_Fitness_HRExercise_Program_ByFitnessId (int *fitnessId*)

get info fitness hrexercise program by fitness id

See Also:

GetInfo_Fitness_HRExercise_Program_ByFitnessId()

Returns:

datarow

Definition at line 1414 of file DBClass.cs.

DataRow DBClass.GetInfo_HeartRate (string *username*)

get info heart rate by username

See Also:

GetInfo_HeartRate()

Returns:

datarow

Definition at line 1170 of file DBClass.cs.

DataRow DBClass.GetInfo_MessageCenter_ById (int *MessageId*)

get info message by id

See Also:

GetInfo_MessageCenter_ById()

Returns:

datarow

Definition at line 582 of file DBClass.cs.

DataRow DBClass.GetInfo_PayBill_CreditCard (string *username*)

get info pay bill card

See Also:

GetInfo_PayBill_CreditCard()

Returns:

datarow

Definition at line 494 of file DBClass.cs.

DataRow DBClass.GetInfo_Position (string *username*)

get info Position by username

See Also:

GetInfo_Position()

Returns:

datarow

Definition at line 1571 of file DBClass.cs.

DataRow DBClass.GetInfo_Rule_ByUserName (string *username*)

get info rule by username

See Also:

GetInfo_Rule_ByUserName()

Returns:

datarow

Definition at line 211 of file DBClass.cs.

DataRow DBClass.GetInfo_Sleep (string *username*)

get info sleep by username

See Also:

GetInfo_Sleep()

Returns:

datarow

Definition at line 1640 of file DBClass.cs.

DataRow DBClass.GetInfo_SpO2 (string *username*)

get info oxygen by username

See Also:

GetInfo_SpO2()

Returns:

datarow

Definition at line 1238 of file DBClass.cs.

DataRow DBClass.GetInfo_SpO2_TrackingModeType (int *Id*)

get info oxygen tracking mode type by id

See Also:

GetInfo_SpO2_TrackingModeType()

Returns:

datarow

Definition at line 1229 of file DBClass.cs.

DataRow DBClass.GetInfo_Stress (string *username*)

get info stress by username

See Also:

GetInfo_Stress()

Returns:

datarow

Definition at line 1463 of file DBClass.cs.

DataTable DBClass.GetInfo_UserAll_ByUserName (string *UserName*)

get info user by username

See Also:

GetInfo_UserAll_ByUserName()

Returns:

datatable

Definition at line 689 of file DBClass.cs.

DataRow DBClass.GetInfo_UserOverview (string *Username*)

get info user overview by username

See Also:

GetInfo_UserOverview()

Returns:

datarow

Definition at line 758 of file DBClass.cs.

DataRow DBClass.GetInfo_UsersAll_ByUserName (string *username*)

get user info by username

See Also:

GetInfo_UsersAll_ByUserName()

Returns:

datarow info user

Definition at line 192 of file DBClass.cs.

DataRow DBClass.GetInfo_UsersContact_ByUserName (string *username*)

get info user contact by username

See Also:

GetInfo_UsersContact_ByUserName()

Returns:

datarow

Definition at line 230 of file DBClass.cs.

DataRow DBClass.GetInfo_UserSettingColor (string *UserName*)

get info color by username

See Also:

GetInfo_UserSettingColor()

Returns:

datarow info color by username

Definition at line 650 of file DBClass.cs.

DataRow DBClass.GetInfo_UserTrackMyHealth (string *UserName*)

get info track health by username

See Also:

GetInfo_UserTrackMyHealth()

Returns:

datarow info track health by username

Definition at line 999 of file DBClass.cs.

DataRow DBClass.GetInfo_UserTrackMyHealth_Measurement (string *UserName*)

get info track health measurement by username

See Also:

GetInfo_UserTrackMyHealth_Measurement()

Returns:

datarow info track health measurement

Definition at line 659 of file DBClass.cs.

DataSet DBClass.GetList_AdminMessages (int *Id*, string *Code*, string *Title*)

get list message, admin message

See Also:

GetList_AdminMessages()

Returns:

dataset

Definition at line 366 of file DBClass.cs.

DataSet DBClass.GetList_AuthorizedUser (string *username*)

get list user authorize

See Also:

GetList_AuthorizedUser()

Returns:

dataset

Definition at line 240 of file DBClass.cs.

DataTable DBClass.GetList_BillingAccountDetails (string *AccountNumber*)

get list billing account details

See Also:

GetList_BillingAccountDetails()

Returns:

datatable

Definition at line 523 of file DBClass.cs.

DataTable DBClass.GetList_BillingAccountTypes ()

get list billing type

See Also:

GetList_BillingAccountTypes()

Returns:

datatable

Definition at line 221 of file DBClass.cs.

DataTable DBClass.GetList_BillingPayments (string *AccountNumber*)

get list billing payment

See Also:

GetList_BillingPayments()

Returns:

datatable

Definition at line 533 of file DBClass.cs.

DataTable DBClass.GetList_BodyActivityFactorType ()

get list body activity factor type

See Also:

GetList_BodyActivityFactorType()

Returns:

datatable

Definition at line 1085 of file DBClass.cs.

DataTable DBClass.GetList_BodyBFType ()

get list BF Type measurement method

See Also:

GetList_BodyBFType()

Returns:

datatable

Definition at line 1021 of file DBClass.cs.

DataTable DBClass.GetList_BodyBMRTType ()

get list BMR Type measurement method

See Also:

GetList_BodyBMRTType()

Returns:

datatable

Definition at line 1030 of file DBClass.cs.

DataTable DBClass.GetList_BodyFatEval ()

get list body fateval

See Also:

GetList_BodyFatEval()

Returns:

datatable

Definition at line 1067 of file DBClass.cs.

DataTable DBClass.GetList_BodyIWType ()

get list body iw type

See Also:

GetList_BodyIWType()

Returns:

datatable

Definition at line 1076 of file DBClass.cs.

DataSet DBClass.GetList_BodyMeasurement_Datatable (string *username*, DateTime? *fromdate*, DateTime? *todate*)

get list data measurement follow table display

See Also:

GetList_BodyMeasurement_Datatable()

Returns:

datatable

Definition at line 1058 of file DBClass.cs.

DataTable DBClass.GetList_BodyMeasurement_Graph (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list body measurement give graph

See Also:

GetList_BodyMeasurement_Graph()

Returns:

datatable

Definition at line 1130 of file DBClass.cs.

DataTable DBClass.GetList_BodyMeasurement_Table (string *username*, DateTime? *date*)

get list data measurement follow table display

See Also:

GetList_BodyMeasurement_Table()

Returns:

datatable

Definition at line 1048 of file DBClass.cs.

DataSet DBClass.GetList_Countries ()

get list couontry

See Also:

GetList_Countries()

Returns:

dataset

Definition at line 250 of file DBClass.cs.

DataSet DBClass.GetList_CountryStates ()

get list states

See Also:

GetList_CountryStates()

Returns:

dataset

Definition at line 260 of file DBClass.cs.

DataSet DBClass.GetList_CountryStates_ByCountryCode (string *countrycode*)

get list states by country code

See Also:

GetList_CountryStates_ByCountryCode()

Returns:

dataset

Definition at line 279 of file DBClass.cs.

DataSet DBClass.GetList_CreditCardType ()

get list card type

See Also:

GetList_CreditCardType()

Returns:

dataset

Definition at line 269 of file DBClass.cs.

DataTable DBClass.GetList_Datetime_BodyMeasurement (string *username*, DateTime? *fromdate*, DateTime? *todate*)

get list datetime measurement method

See Also:

GetList_Datetime_BodyMeasurement()

Returns:

datatable

Definition at line 1039 of file DBClass.cs.

DataTable DBClass.GetList_EmailTemplates ()

get list email templete

See Also:

GetList_EmailTemplates()

Returns:

datatable

Definition at line 709 of file DBClass.cs.

DataTable DBClass.GetList_Fertility_Graph (string *UserName*, DateTime *FromDate*, DateTime *ToDate*)

get list Fertility give graph

See Also:

GetList_Fertility_Graph()

Returns:

datatable

Definition at line 1558 of file DBClass.cs.

DataTable DBClass.GetList_Fertility_Table (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list Fertility give table

See Also:

GetList_Fertility_Table()

Returns:

datatable

Definition at line 1540 of file DBClass.cs.

DataTable DBClass.GetList_Fertility_Temperature (string *UserName*, DateTime *FromDate*, DateTime *ToDate*)

get list Fertility tempertaure

See Also:

GetList_Fertility_Temperature()

Returns:

datatable

Definition at line 1549 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_Datetime (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list fitness datetime

See Also:

GetList_Fitness_Datetime()

Returns:

datatable

Definition at line 1305 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_HRExercise_Table (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list fitness hrexercise give table

See Also:

GetList_Fitness_HRExercise_Table()

Returns:

datatable

Definition at line 1396 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_HRExerciseType ()

get list fitness hrexercise type

See Also:

GetList_Fitness_HRExerciseType()

Returns:

datatable

Definition at line 1296 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_HRTargetType ()

get list fitness hr target type

See Also:

GetList_Fitness_HRTargetType()

Returns:

datatable

Definition at line 1314 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_HRTargetType_Mutil ()

get list fitness hr target type mutil

See Also:

GetList_Fitness_HRTargetType_Mutil()

Returns:

datatable

Definition at line 1323 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_HRTargetType_Single ()

get list fitness hr target type single

See Also:

GetList_Fitness_HRTargetType_Single()

Returns:

datatable

Definition at line 1332 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_Pedometer_Graph_ByParameterCode (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*, string *ParameterCode*)

get list fitness pedometer graph by parameter code

See Also:

GetList_Fitness_Pedometer_Graph_ByParameterCode()

Returns:

datatable

Definition at line 1405 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_Pedometer_Table (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list fitness pedometer give table

See Also:

GetList_Fitness_Pedometer_Table()

Returns:

datatable

Definition at line 1387 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_PMCaloryBurnType ()

get list fitness pm calory burn type

See Also:

GetList_Fitness_PMCaloryBurnType()

Returns:

datatable

Definition at line 1359 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_PMRemindType ()

get list fitness pm remind type

See Also:

GetList_Fitness_PMRemindType()

Returns:

datatable

Definition at line 1350 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_PMTargetType ()

get list fitness pm target type

See Also:

GetList_Fitness_PMTargetType()

Returns:

datatable

Definition at line 1341 of file DBClass.cs.

DataTable DBClass.GetList_Fitness_ZoneType ()

get list fitness zone type

See Also:

GetList_Fitness_ZoneType()

Returns:

datatable

Definition at line 1432 of file DBClass.cs.

DataTable DBClass.GetList_HeartRate_Datetime (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list heartrate datetime

See Also:

GetList_HeartRate_Datetime()

Returns:

datatable

Definition at line 1152 of file DBClass.cs.

DataTable DBClass.GetList_HeartRate_Graph (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list heart rate give graph

See Also:

GetList_HeartRate_Graph()

Returns:

datatable

Definition at line 1216 of file DBClass.cs.

DataSet DBClass.GetList_HeartRate_HRV_Graph (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list heart rate hrv give graph

See Also:

GetList_HeartRate_HRV_Graph()

Returns:

dataset

Definition at line 1207 of file DBClass.cs.

DataSet DBClass.GetList_HeartRate_HRV_Table (string *username*, DateTime? *fromdate*, DateTime? *todate*)

get list heart rate hrv give table

See Also:

GetList_HeartRate_HRV_Table()

Returns:

dataset

Definition at line 1198 of file DBClass.cs.

DataTable DBClass.GetList_HeartRate_Table (string *username*, DateTime? *fromdate*, DateTime? *todate*)

get list heart rate give table

See Also:

GetList_HeartRate_Table()

Returns:

datatable

Definition at line 1189 of file DBClass.cs.

DataTable DBClass.GetList_HeartRateHREstType ()

get list heart rate hrest type

See Also:

GetList_HeartRateHREstType()

Returns:

datatable

Definition at line 1143 of file DBClass.cs.

DataTable DBClass.GetList_MemberType ()

get list member type

See Also:

GetList_MemberType()

Returns:

datatable

Definition at line 202 of file DBClass.cs.

DataTable DBClass.GetList_MessageCenter_Alarm (string *UserName*)

get list message alarm

See Also:

GetList_MessageCenter_Alarm()

Returns:

datatable

Definition at line 553 of file DBClass.cs.

DataTable DBClass.GetList_MessageCenter_Inbox (string *UserName*)

get list message inbox

See Also:

GetList_MessageCenter_Inbox()

Returns:

datatable

Definition at line 543 of file DBClass.cs.

DataTable DBClass.GetList_MessageCenter_Sent (string *UserName*)

get list message sent

See Also:

GetList_MessageCenter_Sent()

Returns:

datatable

Definition at line 563 of file DBClass.cs.

DataTable DBClass.GetList_MessageCenter_Trash (string *UserName*)

get list message trash

See Also:

GetList_MessageCenter_Trash()

Returns:

datatable

Definition at line 573 of file DBClass.cs.

DataSet DBClass.GetList_Paramaters (int *Id*, string *ParaCode*, string *Description*)

get list parameter

See Also:

GetList_Paramaters()

Returns:

dataset

Definition at line 356 of file DBClass.cs.

DataTable DBClass.GetList_Position_Datetime (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list Position datetime

See Also:

GetList_Position_Datetime()

Returns:

datatable

Definition at line 1617 of file DBClass.cs.

DataTable DBClass.GetList_Position_Graph (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list Position give graph

See Also:

GetList_Position_Graph()

Returns:

datatable

Definition at line 1599 of file DBClass.cs.

DataTable DBClass.GetList_Position_Table (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list data Position give table

See Also:

GetList_Position_Table()

Returns:

datatable

Definition at line 1590 of file DBClass.cs.

DataTable DBClass.GetList_Position_XYZ_Rawdata_Table (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list Position give table

See Also:

GetList_Position_XYZ_Rawdata_Table()

Returns:

datatable

Definition at line 1608 of file DBClass.cs.

DataTable DBClass.GetList_RegisterCodes (string *Rule*, bool? *IsUsing*, bool? *Disable*)

get list code register

See Also:

GetList_RegisterCodes()

Returns:

datatable

Definition at line 406 of file DBClass.cs.

DataTable DBClass.GetList_Sleep_Datetime (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list sleep datetime

See Also:

GetList_Sleep_Datetime()

Returns:

datatable

Definition at line 1631 of file DBClass.cs.

DataTable DBClass.GetList_Sleep_Manual_BySleepId (int *SleepId*)

get list sleep manual by id

See Also:

GetList_Sleep_Manual_BySleepId()

Returns:

datatable

Definition at line 1659 of file DBClass.cs.

DataTable DBClass.GetList_Sleep_Rawdata (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list sleep

See Also:

GetList_Sleep_Rawdata()

Returns:

datatable

Definition at line 1678 of file DBClass.cs.

DataTable DBClass.GetList_SpO2_Datetime (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list oxygen

See Also:

GetList_SpO2_Datetime()

Returns:

datatable

Definition at line 1283 of file DBClass.cs.

DataTable DBClass.GetList_SpO2_Graph (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list oxygen give graph

See Also:

GetList_SpO2_Graph()

Returns:

datatable

Definition at line 1274 of file DBClass.cs.

DataTable DBClass.GetList_SpO2_Table (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list oxygen give table

See Also:

GetList_SpO2_Table()

Returns:

datatable

Definition at line 1265 of file DBClass.cs.

DataTable DBClass.GetList_SpO2_TrackingModeType ()

get list oxygen tracking mode type

See Also:

GetList_SpO2_TrackingModeType()

Returns:

datatable

Definition at line 1247 of file DBClass.cs.

DataTable DBClass.GetList_Stress_Datetime (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list stress

See Also:

GetList_Stress_Datetime()

Returns:

datatable

Definition at line 1509 of file DBClass.cs.

DataTable DBClass.GetList_Stress_Rawdata_Graph (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list stress give graph

See Also:

GetList_Stress_Rawdata_Graph()

Returns:

datatable

Definition at line 1500 of file DBClass.cs.

DataTable DBClass.GetList_Stress_Rawdata_Table (string *UserName*, DateTime? *fromdate*, DateTime? *todate*)

get list stress give table

See Also:

GetList_Stress_Rawdata_Table()

Returns:

datatable

Definition at line 1482 of file DBClass.cs.

DataTable DBClass.GetList_Stress_Table (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list stress give table

See Also:

GetList_Stress_Table()

Returns:

datatable

Definition at line 1491 of file DBClass.cs.

DataTable DBClass.GetList_Temperature_Datetime (string *Username*, DateTime? *FromDate*, DateTime? *ToDate*)

get list track health temperature

See Also:

GetList_Temperature_Datetime()

Returns:

datatable

Definition at line 1008 of file DBClass.cs.

DataTable DBClass.GetList_UnitBPM ()

get list BPM

See Also:

GetList_UnitBPM()

Returns:

datatable

Definition at line 1161 of file DBClass.cs.

DataTable DBClass.GetList_UnitDate ()

get list date

See Also:

GetList_UnitDate()

Returns:

datatable value

Definition at line 978 of file DBClass.cs.

DataTable DBClass.GetList_UnitTime ()

get list time

See Also:

GetList_UnitTime()

Returns:

datatable value

Definition at line 969 of file DBClass.cs.

DataTable DBClass.GetList_User_Login (string *Username*, DateTime? *LoginDateFrom*, DateTime? *LogindDateTo*)

get list user login website

See Also:

GetList_User_Login()

Returns:

datatable

Definition at line 416 of file DBClass.cs.

DataTable DBClass.GetList_Users (int *userid*, string *username*, bool? *isactive*, string *email*, DateTime? *createdatefrom*, DateTime? *createdateto*)

get list user

See Also:

GetList_Users()

Returns:

datatable

Definition at line 396 of file DBClass.cs.

DataSet DBClass.GetList_Users_Admin (string *UserName*, string *LastName*, string *FirstName*, DateTime? *FromDateOfBirth*, DateTime? *ToDateOfBirth*)

get list all user

See Also:

GetList_Users_Admin()

Returns:

dataset

Definition at line 386 of file DBClass.cs.

DataTable DBClass.GetList_UserTemperature (string *UserName*, DateTime? *FromDate*, DateTime? *ToDate*)

get list user temperature

See Also:

GetList_UserTemperature()

Returns:

datatable

Definition at line 611 of file DBClass.cs.

DataTable DBClass.GetList_UserTrackOthers (string *UserName*)

get list user track others by username

See Also:

GetList_UserTrackOthers()

Returns:

datatable

Definition at line 679 of file DBClass.cs.

virtual DataRow DBClass.GetMessageByCode (string *message_code*) [virtual]

get message by code

See Also:

GetMessageByCode()

Returns:

datarow value

Definition at line 948 of file DBClass.cs.

static string DBClass.GetMessageByCode2 (string *message_code*) [static]

get message by code

See Also:

GetMessageByCode2()

Returns:

string value

Definition at line 957 of file DBClass.cs.

int DBClass.GetValue_Paramter_ByCode (string *code*)

get value parameter by code

See Also:

GetValue_Paramter_ByCode()

Returns:

int value code

Definition at line 778 of file DBClass.cs.

string DBClass.Insert_BillingInfo (string *NameCard*, string *Address*, string *AddressLine2*, string *City*, string *StateCode*, string *ZIPCode*, string *CountryCode*, string *Phone*, string *Email*, int *CardTypeId*, string *CardNumber*, string *ExpirationMonth*, string *ExpirationYear*, string *SercurityCode*, string *AccountNumber*, decimal *AmountPay*)

insert billing

See Also:

Insert_BillingInfo()

Returns:

string

Definition at line 749 of file DBClass.cs.

DataRow DBClass.Insert_MessageCenter (string *MailFrom*, string *Subject*, string *MailTo*, string *MessageCenter*)

sent mail from user to user

See Also:

Insert_MessageCenter()

Returns:

datarow

Definition at line 467 of file DBClass.cs.

DataRow DBClass.Insert_UsersAuthorizes (string *username*, string *authorizeduser*)

insert user authorize

See Also:

Insert_UsersAuthorizes()

Returns:

datarow

Definition at line 288 of file DBClass.cs.

int DBClass.InsertUpdate_AdminMessages (int *Id*, string *Code*, string *Title*, string *TitleVN*, bool *Approved*, string *Note*)

insert message, admin message

See Also:

InsertUpdate_AdminMessages()

Returns:

int value 1 success, 0 failure

Definition at line 376 of file DBClass.cs.

int DBClass.InsertUpdate_BodyMeasurement_Metric (int *autold*, string *username*, int? *iwtypeid*, int? *bftypeid*, int? *bmrtypeid*, int? *fatevalid*, int? *activityfactortypeid*, decimal? *weight*, decimal? *height*, decimal? *waist*, decimal? *hip*, decimal? *neck*)

insert update body measurement follow format Metric

See Also:

InsertUpdate_BodyMeasurement_Metric()

Returns:

int

Definition at line 1112 of file DBClass.cs.

int DBClass.InsertUpdate_BodyMeasurement_US (int *autold*, string *username*, int? *iwtypeid*, int? *bftypeid*, int? *bmrtypeid*, int? *fatevalid*, int? *activityfactortypeid*, decimal? *weight*, decimal? *heightfeet*, decimal? *heightinch*, decimal? *waist*, decimal? *hip*, decimal? *neck*)

insert update body measurement follow format US

See Also:

InsertUpdate_BodyMeasurement_US()

Returns:

int

Definition at line 1103 of file DBClass.cs.

int DBClass.InsertUpdate_EmailTemplates (int *id*, string *code*, string *subject*, string *body*, string *note*)

get info email templete

See Also:

InsertUpdate_EmailTemplates()

Returns:

int value 1 success, 0 failure

Definition at line 729 of file DBClass.cs.

object DBClass.InsertUpdate_Fertility (int *Autold*, string *username*, bool *IsInputAuto*)

insert update Fertility

See Also:

InsertUpdate_Fertility()

Returns:

object

Definition at line 1531 of file DBClass.cs.

int DBClass.InsertUpdate_Fitness (int *autold*, string *username*, int? *HRExerciseld*, int? *HRTargetld*, int? *PMTargetld*, int? *PMRemindld*, int? *PMCaloryBurnld*)

insert update fitness

See Also:

InsertUpdate_Fitness()

Returns:

int

Definition at line 1377 of file DBClass.cs.

int DBClass.InsertUpdate_Fitness_HRExercise_Program (int *fitnessId*, string *userName*, int? *numberOfStage*, string *programName*, string *transitionAudio*)

insert update fitness hrexercise program

See Also:

InsertUpdate_Fitness_HRExercise_Program()

Returns:

int

Definition at line 1441 of file DBClass.cs.

int DBClass.InsertUpdate_Fitness_HRExercise_Program_Details (int *fitnessHRProgramId*, string *stages*, string *zonelds*, string *timeValues*, string *timelds*)

insert update fitness hrexercise program details

See Also:

InsertUpdate_Fitness_HRExercise_Program_Details()

Returns:

int

Definition at line 1451 of file DBClass.cs.

int DBClass.InsertUpdate_HeartRate (int *autold*, string *username*, decimal? *samplerate*, int? *srUnitTimeld*, int? *maxHREstimationId*, int? *highRestHR*, int? *lowRestHR*, decimal? *hrvanalysisInteral*, int? *hrvUnitTimeld*)

insert update heart rate

See Also:

InsertUpdate_HeartRate()

Returns:

int

Definition at line 1179 of file DBClass.cs.

int DBClass.InsertUpdate_Paramaters (int *Id*, string *ParamCode*, string *Description*, string *Value*, bool *Active*, string *Note*)

insert update parameter

See Also:

InsertUpdate_Paramaters()

Returns:

int value 1 success, 0 failure

Definition at line 438 of file DBClass.cs.

int DBClass.InsertUpdate_Position (int *autold*, string *username*, decimal? *SampleRate*, int? *SampleRateId*, bool *IsSupine*, bool *IsProne*, bool *IsLeft*, bool *IsRight*, bool *IsUp*, bool *IsDown*)

insert update Position

See Also:

InsertUpdate_Position()

Returns:

int

Definition at line 1580 of file DBClass.cs.

int DBClass.InsertUpdate_Sleep (int *autold*, string *username*, decimal? *HRSampleRate*, int? *HRSampleRateId*, decimal? *GSRSampleRate*, int? *GSRSampleRateId*, decimal? *AccSampleRate*, int? *AccSampleRateId*, decimal? *SkinTempSampleRate*, int? *SkinTempSampleRateId*, bool *IsAlarmSetting*, decimal? *SleepDuration*, int? *SleepDurationId*)

insert update sleep

See Also:

InsertUpdate_Sleep()

Returns:

int

Definition at line 1649 of file DBClass.cs.

int DBClass.InsertUpdate_Sleep_Manual (int *sleepId*, string *names*, string *unitDatelds*, string *unitTimeValues*, string *unitTimeIds*)

insert update sleep manual

See Also:

InsertUpdate_Sleep_Manual()

Returns:

int

Definition at line 1668 of file DBClass.cs.

object DBClass.InsertUpdate_SpO2 (int *autold*, string *username*, decimal? *SampleRate*, int? *SampleRateId*, int? *TrackingTypeId*, decimal? *Threshold*, decimal? *MeasurementValue*, int? *MeasurementId*)

insert update oxygen

See Also:

InsertUpdate_SpO2()

Returns:

object

Definition at line 1256 of file DBClass.cs.

int DBClass.InsertUpdate_Stress (int *autold*, string *username*, decimal? *MeasureDuration*, int? *MDUnitTimeId*, decimal? *HRSampleRate*, int? *HRSRUnitTimeId*, decimal? *GSRSampleRate*, int? *GSRSRUnitTimeId*, decimal? *AccelSampleRate*, int? *ASRUnitTimeId*)

insert update stress

See Also:

InsertUpdate_Stress()

Returns:

int

Definition at line 1472 of file DBClass.cs.

int DBClass.InsertUpdate_Users (string *username*, string *userpass*, string *passhint*, int *usertypeid*, bool *isactive*)

insert, update user

See Also:

InsertUpdate_Users()

Parameters:

<i>username</i>	if username exist then update, else insert
-----------------	--

Returns:

value 1 success, 0 failure

Definition at line 154 of file DBClass.cs.

int DBClass.InsertUpdate_UsersContact (string *username*, string *name*, string *email*, string *phone*, string *address*, bool *IsMain*)

insert, update user contact

See Also:

InsertUpdate_UsersContact()

Parameters:

<i>username</i>	if username exist then update, else insert
-----------------	--

Returns:

value 1 success, 0 failure

Definition at line 166 of file DBClass.cs.

int DBClass.InsertUpdate_UserSettingColor (string *UserName*, int *SkinTempColorId*, int *AmbTempColorId*, int *BackgroundColorId*)

insert update color for user

See Also:

InsertUpdate_UserSettingColor()

Returns:

int value 1 success, 0 failure

Definition at line 621 of file DBClass.cs.

int DBClass.InsertUpdate_UsersInfo (string *username*, string *firstname*, string *lastname*, DateTime? *dateofbirth*, bool *isgender*, string *emailaddress*, string *streetaddress*, string *citycode*, string *statecode*, string *zipcode*, string *county*, string *countrycode*, string *homephone*, string *mobilephone*, string *registrationcode*)

insert, update user info

See Also:

InsertUpdate_UsersInfo()

Parameters:

<i>username</i>	if username exist then update, else insert
-----------------	--

Returns:

value 1 success, 0 failure

Definition at line 178 of file DBClass.cs.

int DBClass.InsertUpdate_UserTrackMyHealth_Measurement (string *UserName*, bool *Metric*, bool *US*)

insert update track health measurement

See Also:

InsertUpdate_UserTrackMyHealth_Measurement()

Returns:

int value 1 success, 0 failure

Definition at line 669 of file DBClass.cs.

int DBClass.InsertUpdate_UserTrackMyHealth_Threshold (string *UserName*, decimal? *Samplerate*, int? *SampleRateId*, decimal? *LowValue*, decimal? *HighValue*, decimal? *VeryHighValue*)

insert update track health threshold

See Also:

InsertUpdate_UserTrackMyHealth_Threshold()

Returns:

int value 1 success, 0 failure

Definition at line 990 of file DBClass.cs.

DataRow DBClass.Invalid_RegistrationCode (string *registercode*)

check register code exist

See Also:

Invalid_RegistrationCode()

Returns:

datarow

Definition at line 797 of file DBClass.cs.

string DBClass.Invite_Membertype (string *memberType*)

invite member type

See Also:

Invite_Membertype()

Returns:

string

Definition at line 788 of file DBClass.cs.

int DBClass.IsActive_User_ByIds (string *Ids*, bool *isActive*)

active 1 array id

See Also:

IsActive_User_ByIds() ids array id

Parameters:

<i>isactive</i>	true active, false deactive
-----------------	-----------------------------

Returns:

int value 1 success, 0 failure

Definition at line 428 of file DBClass.cs.

bool DBClass.IsActive_User_ByWebCode (string *WebCode*)

active user register by webcode

See Also:

IsActive_User_ByWebCode()

Returns:

bool value 1 success, 0 failure

Definition at line 739 of file DBClass.cs.

int DBClass.IsAllowCheckStatusRegistrationCodeInSendEmail ()

check webcode when register

See Also:

IsAllowCheckStatusRegistrationCodeInSendEmail()

Returns:

int value 1 success, 0 failure

Definition at line 809 of file DBClass.cs.

object DBClass.IsExists_Email (string email)

check email is exist

See Also:

IsExists_Email()

Returns:

object value 1 exist, 0 not exist

Definition at line 328 of file DBClass.cs.

bool DBClass.IsInvalid_EmailAddress (string username, string emailaddress)

check email by username, change email address

See Also:

IsInvalid_EmailAddress()

Returns:

bool value

Definition at line 915 of file DBClass.cs.

DataRow DBClass.Login_Website (string username, string userpass, string loginfromcomputerip)

login website

See Also:

Login_Website()

Returns:

datarow info user login

Definition at line 297 of file DBClass.cs.

DataRow DBClass.Register_Account_Users (string username, string userpass, string passhint, string firstname, string lastname, DateTime? dateofbirth, bool isgender, string emailaddress, string streetaddress, string citycode, string statecode, string zipcode, string county, string countrycode, string homephone, string mobilephone, string registeredip, string registrationcode)

register new user

See Also:

Register_Account_Users()

Returns:

datarow user info register

Definition at line 306 of file DBClass.cs.

object DBClass.Register_Validation_UserName (string *username*)

check username register

See Also:

Register_Validation_UserName()

Returns:

object value 1 username validation, 0 unvalidation

Definition at line 319 of file DBClass.cs.

int DBClass.Set_RegisterCode_Using (string *Code*)

delete parameter by id

See Also:

DeleteParamaters()

Returns:

int value 1 success, 0 failure

Definition at line 458 of file DBClass.cs.

DataRow DBClass.Submit_Forgot_Password (string *username*, DateTime? *dateofbirth*)

check info user forgot password

See Also:

Submit_Forgot_Password()

Returns:

datarow

Definition at line 337 of file DBClass.cs.

DataRow DBClass.Submit_Forgot_UserName (string *firstname*, string *lastname*, DateTime? *dateofbirth*, string *zipcode*)

check info user forgot username

See Also:

Submit_Forgot_UserName()

Returns:

datarow

Definition at line 346 of file DBClass.cs.

int DBClass.Update_BillingAccount_Management (string *AccountNumber*, int *BillingType*id, DateTime? *EffDate*, decimal *AmountCharge*, bool *IsPayBill*, string *Notes*)

update billing account

See Also:

Update_BillingAccount_Management()

Returns:

int value 1 success, 0 failure

Definition at line 631 of file DBClass.cs.

int DBClass.Update_UserOverview (string *UserNameOld*, string *UserNameNew*, string *Email*, string *Warning*, string *Password*)

update user overview

See Also:

Update_UserOverview()

Returns:

int value 1 success, 0 failure

Definition at line 768 of file DBClass.cs.

int DBClass.UpdateGlobalSetting (string *UserName*)

update global setting

See Also:

UpdateGlobalSetting()

Returns:

int value 1 success, 0 failure

Definition at line 601 of file DBClass.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/DBClass.cs

demo Class Reference

Inheritance diagram for demo:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file demo.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/demo.aspx.cs

Domain Class Reference

create property

Static Public Member Functions

- static T **Create**< T > (string id, string name)
-

Detailed Description

create property

Definition at line 94 of file DomainObject.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/DomainObject.cs

DomainObject Class Reference

class build property

Inheritance diagram for DomainObject:

Public Member Functions

- `IDataRecord CreateDataRecord ()`

Static Public Member Functions

- `static List< T > Combine< T > (params List< T >[] objs)`
- `static List< T > Intersect< T > (params List< T >[] objs)`
- `static List< T > IntersectExclusive< T > (params List< T >[] objs)`

Properties

- `string Id` [get, set]
- `string Name` [get, set]

Detailed Description

class build property

Definition at line 25 of file `DomainObject.cs`.

The documentation for this class was generated from the following file:

- `~/Source/SmartHomeCare/App_Code/DomainObject.cs`

forgotpassword Class Reference

Inheritance diagram for forgotpassword:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnsubmit_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file forgotpassword.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/forgotpassword.aspx.cs

forgotusername Class Reference

Inheritance diagram for forgotusername:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnsubmit_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file forgotusername.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/forgotusername.aspx.cs

fqas Class Reference

Inheritance diagram for fqas:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file fqas.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/fqas.aspx.cs

WebForm.GetChart Class Reference

Summary description for **GetChart**.

Inheritance diagram for WebForm.GetChart:

Protected Member Functions

- void **Page_Load** (object sender, System.EventArgs e)
- override void **OnInit** (EventArgs e)

Detailed Description

Summary description for **GetChart**.

Definition at line 19 of file GetChart.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/GetChart.aspx.cs

gotohome Class Reference

Inheritance diagram for gotohome:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file gotohome.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/gotohome.aspx.cs

home Class Reference

Inheritance diagram for home:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
HÃ m Ä‘á»f load trang.
- void **btnsignin_Click** (object sender, EventArgs e)
- void **lnkregister_Click** (object sender, EventArgs e)
- void **lnkfqas_Click** (object sender, EventArgs e)
- void **lnkprivacypolicy_Click** (object sender, EventArgs e)
- void **lnktermsandconditions_Click** (object sender, EventArgs e)

Detailed Description

Home class for login.

Class này duoc su dung de lÃ m gÃ¬ Ä‘Ã³ ai mÃ biáºt

Definition at line 15 of file home.aspx.cs.

Member Function Documentation

void home.Page_Load (object sender, EventArgs e) [protected]

HÃ m Ä‘á»f load trang.

Hàm này duoc su dung de load trang web.

Parameters:

<i>sender</i>	la mot cai j do
<i>e</i>	la mot cai j khac nua

Returns:

la mot hai ba bon nam

See Also:

btnsignin_Click()

Definition at line 28 of file home.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/home.aspx.cs

IDataRecord Interface Reference

class interface of DataRecord

Detailed Description

class interface of DataRecord

Definition at line 9 of file DomainObject.cs.

The documentation for this interface was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/DomainObject.cs

IDomainObject Interface Reference

class interface of **DomainObject**

Inheritance diagram for IDomainObject:

Public Member Functions

- **IDataRecord CreateDataRecord ()**

Properties

- string **Id** [get, set]
- string **Name** [get, set]

Detailed Description

class interface of **DomainObject**

Definition at line 15 of file DomainObject.cs.

The documentation for this interface was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/DomainObject.cs

loadHomePage Class Reference

Inheritance diagram for loadHomePage:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 8 of file loadHomePage.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/loadHomePage.aspx.cs

MailDaemon Class Reference

process send mail

Static Public Member Functions

- static void **registration** (string *email*, string *name*, string *webcode*)
 - static void **forgotusername** (string *email*, string *name*, string *username*)
 - static void **forgotpassword** (string *email*, string *name*, string *passhint*)
 - static void **invitenewmember** (string *email*, string *code*, string *name*)
-

Detailed Description

process send mail

Definition at line 15 of file MailDaemon.cs.

Member Function Documentation

static void MailDaemon.forgotpassword (string *email*, string *name*, string *passhint*) [*static*]

send mail, get back password

See Also:

forgotpassword()

Parameters:

<i>email</i>	is email account
<i>name</i>	is name account
<i>passhint</i>	sent mail

Definition at line 300 of file MailDaemon.cs.

static void MailDaemon.forgotusername (string *email*, string *name*, string *username*) [*static*]

send mail, get back username

See Also:

forgotusername()

Parameters:

<i>email</i>	is email account
<i>name</i>	is name account
<i>username</i>	sent mail

Definition at line 254 of file MailDaemon.cs.

static void MailDaemon.invitenewmember (string *email*, string *code*, string *name*) [*static*]

send mail, invite new member

See Also:

invitenewmember()

Parameters:

<i>email</i>	is invite
--------------	-----------

<i>code</i>	permission
<i>name</i>	is Invitations

Definition at line 344 of file MailDaemon.cs.

static void MailDaemon.registration (string *email*, string *name*, string *webcode*) [static]

send mail, enable registration

See Also:

registration()

Parameters:

<i>email</i>	is email registration
<i>name</i>	is name recipient
<i>webcode</i>	is enable account

Definition at line 212 of file MailDaemon.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/MailDaemon.cs

MessageBox Class Reference

messages box use for project

Static Public Member Functions

- static void **jQueryShow** (ClientScriptManager clientScript, Type type, string Message, string title)
- static void **Show** (string Message)

Static Protected Attributes

- static Hashtable **handlerPages** = new Hashtable()

Detailed Description

messages box use for project

Definition at line 13 of file MessageBox.cs.

Member Function Documentation

static void MessageBox jQueryShow (ClientScriptManager *clientScript*, Type *type*, string *Message*, string *title*) [*static*]

[jQueryShow] Show messages with jquery.

Definition at line 24 of file MessageBox.cs.

static void MessageBox.Show (string *Message*) [*static*]

[Messages Box Nomal] Show Messages box normal

Definition at line 53 of file MessageBox.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/MessageBox.cs

NullObject Class Reference

property default null

Inheritance diagram for NullObject:

Public Member Functions

- **IDataRecord CreateDataRecord ()**

Properties

- string **Id** [get, set]
- string **Name** [get, set]

Detailed Description

property default null

Definition at line 84 of file DomainObject.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/DomainObject.cs

popupDateTime Class Reference

Inheritance diagram for popupDateTime:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 8 of file popupDateTime.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/popupDateTime.aspx.cs

privacypolicy Class Reference

Inheritance diagram for privacypolicy:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file privacypolicy.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/privacypolicy.aspx.cs

register Class Reference

Inheritance diagram for register:

Static Public Member Functions

- static bool **UserNameChecker** (string username)

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnregister_Click** (object sender, EventArgs e)
- void **imgreload_Click** (object sender, ImageClickEventArgs e)
- void **ddlcountry_SelectedIndexChanged** (object sender, EventArgs e)
- void **btnaddmore_Click** (object sender, EventArgs e)
- override void **OnLoad** (EventArgs e)

Detailed Description

Definition at line 10 of file register.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/register.aspx.cs

registersuccessfull Class Reference

Inheritance diagram for registersuccessfull:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file registersuccessfull.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/registersuccessfull.aspx.cs

Security Class Reference

all security method.

Public Member Functions

- string **Encrypt** (string key, string toEncrypt)
- string **Decrypt** (string key, string toDecrypt)

Static Public Member Functions

- static string **GetVersion** ()
- static string **GenerateRandomCode** ()
- static string **GetClientIP** ()
- static string **GetServerIP** ()

Detailed Description

all security method.

Definition at line 13 of file Security.cs.

Member Function Documentation

string Security.Decrypt (string *key*, string *toDecrypt*)

Decrypt 1 string

See Also:

Decrypt()

Parameters:

<i>key</i>	is key Decrypt
<i>toEncrypt</i>	is value Decrypt

Definition at line 54 of file Security.cs.

string Security.Encrypt (string *key*, string *toEncrypt*)

Encrypt 1 string

See Also:

Encrypt()

Parameters:

<i>key</i>	is key encrypt
<i>toEncrypt</i>	is value encrypt

Definition at line 32 of file Security.cs.

static string Security.GenerateRandomCode () [static]

create 1 string random

See Also:

GenerateRandomCode()

Definition at line 75 of file Security.cs.

static string Security.GetClientIP () [static]

get ip client(browser ip)

See Also:

GetClientIP()

Definition at line 88 of file Security.cs.

static string Security.GetServerIP () [static]

get ip server(local ip)

See Also:

GetServerIP()

Definition at line 98 of file Security.cs.

static string Security.GetVersion () [static]

Get version update

Definition at line 22 of file Security.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/Security.cs

Service Class Reference

convert data for webservice

Inheritance diagram for Service:

Public Member Functions

- XmlNode **RenameNode** (XmlNode node, string namespaceURI, string qualifiedName)

Static Public Member Functions

- static XmlDocument **CreateSerializedObject** (object obj)

Protected Member Functions

- XmlDocument **SerializeObject** (object obj)
- XmlDocument **SerializeObjects** (params object[] objs)
- XmlDocument **AddObjectToDocument** (XmlDocument document, string nodeName, object obj)

Detailed Description

convert data for webservice

Definition at line 11 of file Service.cs.

Member Function Documentation

XmlDocument Service.AddObjectToDocument (XmlDocument *document*, string *nodeName*, object *obj*) [*protected*]

add node to XmlDocument

See Also:

AddObjectToDocument()

Parameters:

<i>nodeName</i>	is key node
<i>obj</i>	is value node

Definition at line 97 of file Service.cs.

static XmlDocument Service.CreateSerializedObject (object *obj*) [*static*]

convert object to XmlDocument

See Also:

CreateSerializedObject()

Definition at line 18 of file Service.cs.

XmlNode Service.RenameNode (XmlNode *node*, string *namespaceURI*, string *qualifiedName*)

rename node of XmlDocument

See Also:

RenameNode()

Parameters:

<i>node</i>	need rename
<i>qualifiedName</i>	is value new node

Definition at line 155 of file Service.cs.

XmlDocument Service.SerializeObject (object *obj*) [protected]

convert object to XmlDocument

See Also:

SerializeObject()

Definition at line 26 of file Service.cs.

XmlDocument Service.SerializeObjects (params object[] *objs*) [protected]

convert object array to XmlDocument

See Also:

SerializeObjects()

Definition at line 34 of file Service.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/Service.cs

site Class Reference

Inheritance diagram for site:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file site.master.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/site.master.cs

siteadmin Class Reference

Inheritance diagram for siteadmin:

Public Attributes

- TreeView **treeview**
- const int **USERMANAGEMENT** = 0
- const int **REPORTS** = 1
- const int **LOGS** = 2
- const int **SYSTEMTOOLS** = 3
- const int **MESSAGECENTER** = 4
- const int **MYACCOUNT** = 5
- const int **STATISTICS** = 0
- const int **WEBADMINLOGS** = 0
- const int **SYNCLOG** = 1
- const int **SECURITY** = 0
- const int **CONFIGURE** = 1
- const int **INBOX** = 1
- const int **COMPOSE** = 0
- const int **SENTMESSAGES** = 2
- const int **TRASH** = 3

Protected Member Functions

- void **Page_Init** (object sender, EventArgs e)
- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file siteadmin.master.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/siteadmin.master.cs

sitehome Class Reference

Inheritance diagram for sitehome:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file sitehome.master.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/sitehome.master.cs

siteuser Class Reference

Inheritance diagram for siteuser:

Public Attributes

- TreeView **treeview**
- const int **HOME** = 0
- const int **MYPROFILE** = 1
- const int **REPORTS** = 2
- const int **MESSAGECENTER** = 3
- const int **MYACCOUNT** = 4
- const int **USERINFORMATION** = 0
- const int **CHANGEPASSWORD** = 1
- const int **AUTHORIZEDUSERS** = 2
- const int **TRACKMYHEALTH** = 0
- const int **TRACKOTHERS** = 1
- const int **COMPOSE** = 0
- const int **INBOX** = 1
- const int **SENTMESSAGES** = 2
- const int **ALARMMESSAGES** = 3
- const int **TRASH** = 4
- const int **BILLINGACCOUNTSUMMAR** = 0
- const int **COVERAGEDetails** = 1

Protected Member Functions

- void **Page_Init** (object sender, EventArgs e)
- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file siteuser.master.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/siteuser.master.cs

SteeChart Class Reference

Inheritance diagram for SteeChart:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **DropDownList1_SelectedIndexChanged** (object sender, EventArgs e)
- void **WebChart1_GetAxisLabel** (object sender, Steema.TeeChart.GetAxisLabelEventArgs e)
- void **WebChart1_ClickAxis** (object sender, ImageClickEventArgs e)
- void **WebChart1_AfterDraw** (object sender, Steema.TeeChart.Drawing.Graphics3D g)
- void **WebChart1_ClickSeries** (object sender, Series s, int valueIndex, EventArgs e)
- void **Button1_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 15 of file SteeChart.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/SteeChart.aspx.cs

Steechart2 Class Reference

Inheritance diagram for Steechart2:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 16 of file Steechart2.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/Steechart2.aspx.cs

termsandconditions Class Reference

Inheritance diagram for termsandconditions:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 8 of file termsandconditions.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/termsandconditions.aspx.cs

test Class Reference

Inheritance diagram for test:

Static Public Attributes

- static int **i** =1

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnNext_Click** (object sender, EventArgs e)
- void **btn_back_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file test.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/test.aspx.cs

ToSQL Class Reference

convert data

Static Public Member Functions

- static string **EmptyNull** (object Obj)
- static int **SQLToInt** (object Obj)
- static int **SQLToIntNull** (object Obj)
- static decimal **SQLToDecimal** (object Obj)
- static decimal **SQLToDecimalNull** (object Obj)
- static double **SQLToDouble** (object Obj)
- static bool **SQLToBool** (object Obj)
- static DateTime **SQLToDateTime** (object Obj)
- static bool **IsNumeric** (object Obj)
- static bool **IsDate** (object Obj)
- static string **SQLString** (object Obj)
- static string **SQLUString** (object Obj)
- static string **SQLLikeString** (object Obj)
- static string **SQLNumeric** (object Obj)
- static string **SQLBit** (object Obj)
- static string **SQLBitNull** (object Obj)
- static string **SQLDate** (DateTime?Obj)
- static DateTime **SQLToDateTime24H** (string Obj)
- static string **SQLDateNonHour** (DateTime Obj)

Detailed Description

convert data

Definition at line 9 of file ToSQL.cs.

Member Function Documentation

static string ToSQL.EmptyNull (object *Obj*) [static]

convert object to string

See Also:

EmptyNull()

Definition at line 15 of file ToSQL.cs.

static bool ToSQL.IsDate (object *Obj*) [static]

check object is date

See Also:

IsDate()

Definition at line 143 of file ToSQL.cs.

static bool ToSQL.IsNumeric (object *Obj*) [static]

check object is numeric

See Also:

IsNumeric()

Definition at line 127 of file ToSQL.cs.

static string ToSQL.SQLBit (object *Obj*) [static]

convert object to string

See Also:

SQLBit()

Definition at line 201 of file ToSQL.cs.

static string ToSQL.SQLBitNull (object *Obj*) [static]

convert object to string

See Also:

SQLBitNull()

Definition at line 211 of file ToSQL.cs.

static string ToSQL.SQLDate (DateTime? *Obj*) [static]

convert date to string

See Also:

SQLDate()

Definition at line 226 of file ToSQL.cs.

static string ToSQL.SQLDateNonHour (DateTime *Obj*) [static]

convert date to string

See Also:

SQLDateNonHour()

Definition at line 260 of file ToSQL.cs.

static string ToSQL.SQLLikeString (object *Obj*) [static]

convert object to string

See Also:

SQLLikeString()

Definition at line 179 of file ToSQL.cs.

static string ToSQL.SQLNumeric (object *Obj*) [static]

convert object to string

See Also:

SQLNumeric()

Definition at line 189 of file ToSQL.cs.

static string ToSQL.SQLString (object *Obj*) [static]

convert object to string

See Also:

SQLString()

Definition at line 159 of file ToSQL.cs.

static bool ToSQL.SQLToBool (object *Obj*) [static]

convert object to bool

See Also:

SQLToBool()

Definition at line 96 of file ToSQL.cs.

static DateTime ToSQL.SQLToDateTime (object *Obj*) [static]

convert object to date

See Also:

SQLToDateTime()

Definition at line 111 of file ToSQL.cs.

static DateTime ToSQL.SQLToDateTime24H (string *Obj*) [static]

convert string to date

See Also:

SQLToDateTime24H()

Definition at line 242 of file ToSQL.cs.

static decimal ToSQL.SQLToDecimal (object *Obj*) [static]

convert object to decimal

See Also:

SQLToDecimal()

Definition at line 55 of file ToSQL.cs.

static decimal ToSQL.SQLToDecimalNull (object *Obj*) [static]

convert object to decimal

See Also:

SQLToDecimalNull()

Definition at line 70 of file ToSQL.cs.

static double ToSQL.SQLToDouble (object *Obj*) [static]

convert object to double

See Also:

SQLToDouble()

Definition at line 81 of file ToSQL.cs.

static int ToSQL.SQLToInt (object *Obj*) [static]

convert object to int

See Also:

SQLToInt()

Definition at line 29 of file ToSQL.cs.

static int ToSQL.SQLToIntNull (object *Obj*) [static]

convert object to int

See Also:

SQLToIntNull()

Definition at line 44 of file ToSQL.cs.

static string ToSQL.SQLUString (object *Obj*) [static]

convert object to string

See Also:

SQLUString()

Definition at line 169 of file ToSQL.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/ToSQL.cs

urlinvalid Class Reference

Inheritance diagram for urlinvalid:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file urlinvalid.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/urlinvalid.aspx.cs

useraccountdetails Class Reference

Inheritance diagram for useraccountdetails:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 8 of file useraccountdetails.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/useraccountdetails.aspx.cs

useralarmmessages Class Reference

Inheritance diagram for useralarmmessages:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 9 of file useralarmmessages.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/useralarmmessages.aspx.cs

userauthorizedusers Class Reference

Inheritance diagram for userauthorizedusers:

Static Public Member Functions

- static bool **UserNameChecker** (string username)
- static bool **EmailChecker** (string email)

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btndelete_Click** (object sender, EventArgs e)
- void **btnadd_Click** (object sender, EventArgs e)
- void **btninvite_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 10 of file userauthorizedusers.aspx.cs.

The documentation for this class was generated from the following file:

- `~/Source/SmartHomeCare/userauthorizedusers.aspx.cs`

userbillingaccountsummar Class Reference

Inheritance diagram for userbillingaccountsummar:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnseemorepayments_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file userbillingaccountsummar.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userbillingaccountsummar.aspx.cs

userchangepassword Class Reference

Inheritance diagram for userchangepassword:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnsave_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file userchangepassword.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userchangepassword.aspx.cs

usercompose Class Reference

Inheritance diagram for usercompose:

Static Public Member Functions

- static object **SendMailToUser** (object[] args)

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnSend_Click** (object sender, EventArgs e)

Detailed Description

User compose

Definition at line 12 of file usercompose.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usercompose.aspx.cs

userhelp Class Reference

Inheritance diagram for userhelp:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file userhelp.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userhelp.aspx.cs

userhome Class Reference

Inheritance diagram for userhome:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file userhome.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userhome.aspx.cs

userinbox Class Reference

Day la mo ta ngan.

Inheritance diagram for userinbox:

Static Public Member Functions

- static object **ReadMessage** (int id)
- static object **DeleteMessage** (object args)

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btndelate_Click** (object sender, EventArgs e)
- void **LinkButton2_Click** (object sender, EventArgs e)
- void **lbPre_Click** (object sender, EventArgs e)

Detailed Description

Day la mo ta ngan.

Day la mo ta chi tiet

Definition at line 13 of file userinbox.aspx.cs.

Member Function Documentation

void userinbox.btndelate_Click (object sender, EventArgs e) [protected]

[Delete] delete messages.

Definition at line 56 of file userinbox.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userinbox.aspx.cs

userinformation Class Reference

Inheritance diagram for userinformation:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btncedit_Click** (object sender, EventArgs e)
- void **btncancel_Click** (object sender, EventArgs e)
- void **btncsave_Click** (object sender, EventArgs e)
- void **ddlcountry_SelectedIndexChanged** (object sender, EventArgs e)
- void **ddlstate_SelectedIndexChanged** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file userinformation.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userinformation.aspx.cs

userpaybill Class Reference

Inheritance diagram for userpaybill:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btncontinue_Click** (object sender, EventArgs e)
- void **ddlcountry_SelectedIndexChanged** (object sender, EventArgs e)
- void **lbtnprint_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file userpaybill.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userpaybill.aspx.cs

userpaymentinformation Class Reference

Inheritance diagram for userpaymentinformation:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **grdInfo_RowDataBound** (object sender, GridViewRowEventArgs e)

Detailed Description

Definition at line 8 of file userpaymentinformation.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userpaymentinformation.aspx.cs

userpaymentreceipt Class Reference

Inheritance diagram for userpaymentreceipt:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 8 of file userpayment_receipt.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userpayment_receipt.aspx.cs

userpaymentreview Class Reference

Inheritance diagram for userpaymentreview:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnsubmit_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file userpayment_review.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userpayment_review.aspx.cs

userreadmessage Class Reference

Inheritance diagram for userreadmessage:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
-

Detailed Description

Definition at line 8 of file userreadmessage.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/userreadmessage.aspx.cs

Users Class Reference

property user login website

Public Attributes

- const string **MON** ="MON"
- const string **PAR** = "PAR"
- const string **PRI** = "PRI"

Detailed Description

property user login website

Definition at line 9 of file Users.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/App_Code/Users.cs

usersentmessages Class Reference

Inheritance diagram for usersentmessages:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btndelete_Click** (object sender, EventArgs e)
- void **LinkButton2_Click** (object sender, EventArgs e)
- void **lbPre_Click** (object sender, EventArgs e)
- void **LinkButton2_Click** (object sender, ImageClickEventArgs e)

Detailed Description

Definition at line 9 of file usersentmessages.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usersentmessages.aspx.cs

usersitemap Class Reference

Inheritance diagram for usersitemap:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file usersitemap.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usersitemap.aspx.cs

usertrackmyhealth Class Reference

Inheritance diagram for usertrackmyhealth:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **Button1_Click** (object sender, EventArgs e)
- void **btnglobalsettings_Click** (object sender, EventArgs e)
- void **ibtn_Click** (object sender, ImageClickEventArgs e)
- void **ImageButton1_Click** (object sender, ImageClickEventArgs e)
- void **Page_Load** (object sender, EventArgs e)
- void **btnglobalsettings_Click** (object sender, EventArgs e)
- void **ibtn_Click1** (object sender, ImageClickEventArgs e)

Detailed Description

Definition at line 9 of file `usertrackmyhealth.aspx.cs`.

The documentation for this class was generated from the following files:

- `~/Source/SmartHomeCare/usertrackmyhealth.aspx.cs`
- `~/Source/SmartHomeCare/usertrackotherhealth.aspx.cs`

usertrackmyhealth_bodymeasurement Class Reference

Inheritance diagram for usertrackmyhealth_bodymeasurement:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnGraph2_Click** (object sender, EventArgs e)
- void **btnTable2_Click** (object sender, EventArgs e)
- void **grvTemp_PageIndexChanging** (object sender, GridViewPageEventArgs e)
- void **Button1_Click** (object sender, EventArgs e)
- void **btnOk_Click** (object sender, EventArgs e)
- void **btnView_Click** (object sender, EventArgs e)
- void **btn_Ok_Table_Click** (object sender, EventArgs e)
- void **btncancel2_Click** (object sender, EventArgs e)
- void **lbDateTable_Click** (object sender, EventArgs e)
- void **btnCancel_Click** (object sender, EventArgs e)
- void **lbtnDateTime_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 12 of file usertrackmyhealth_bodymeasurement.aspx.cs.

Member Function Documentation

void usertrackmyhealth_bodymeasurement.btn_Ok_Table_Click (object sender, EventArgs e) [protected]

[Filter for table report]Filter data with datetime selected.

Definition at line 315 of file usertrackmyhealth_bodymeasurement.aspx.cs.

void usertrackmyhealth_bodymeasurement.btncancel2_Click (object sender, EventArgs e) [protected]

[Cancel] click -> popup datetime table close.

Definition at line 324 of file usertrackmyhealth_bodymeasurement.aspx.cs.

void usertrackmyhealth_bodymeasurement.btnCancel_Click (object sender, EventArgs e) [protected]

[Cancel] click -> popup datetime graph close.

Definition at line 338 of file usertrackmyhealth_bodymeasurement.aspx.cs.

void usertrackmyhealth_bodymeasurement.btnView_Click (object sender, EventArgs e) [protected]

[Filter] Filter Bodymeasurement data.

Definition at line 206 of file usertrackmyhealth_bodymeasurement.aspx.cs.

void usertrackmyhealth_bodymeasurement.lbDataTable_Click (object sender, EventArgs e) [protected]

[Datetime Table] click -> popup datetime table open.

Definition at line 331 of file usertrackmyhealth_bodymeasurement.aspx.cs.

void usertrackmyhealth_bodymeasurement.lbtnDateTime_Click (object sender, EventArgs e) [protected]

[Datetime] click -> popup datetime graph open.

Definition at line 345 of file usertrackmyhealth_bodymeasurement.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usertrackmyhealth_bodymeasurement.aspx.cs

usertrackmyhealth_bodymeasurement_settings Class Reference

Inheritance diagram for usertrackmyhealth_bodymeasurement_settings:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnEdit_Click** (object sender, EventArgs e)
- void **btnSave_Click** (object sender, EventArgs e)
- void **btnCancel_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file usertrackmyhealth_bodymeasurement_settings.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usertrackmyhealth_bodymeasurement_settings.aspx.cs

usertrackmyhealth_fertility Class Reference

Inheritance diagram for usertrackmyhealth_fertility:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnGraph2_Click** (object sender, EventArgs e)
- void **btnTable2_Click** (object sender, EventArgs e)
- void **btn_Ok_Table_Click** (object sender, EventArgs e)
- void **lbtnNextMonth_Click** (object sender, EventArgs e)
- void **lbtnPrevMonth_Click** (object sender, EventArgs e)
- void **lbtnNextWeek_Click** (object sender, EventArgs e)
- void **lbtnPrevWeek_Click** (object sender, EventArgs e)
- void **Datetime_Click** (object sender, EventArgs e)
- void **btncancel2_Click** (object sender, EventArgs e)
- void **lbBack_Click** (object sender, EventArgs e)
- void **lbNext_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 10 of file usertrackmyhealth_fertility.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usertrackmyhealth_fertility.aspx.cs

usertrackmyhealth_fertility_settings Class Reference

Inheritance diagram for usertrackmyhealth_fertility_settings:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnEdit_Click** (object sender, EventArgs e)
- void **btnSave_Click** (object sender, EventArgs e)
- void **btnCancel_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 9 of file usertrackmyhealth_fertility_settings.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usertrackmyhealth_fertility_settings.aspx.cs

usertrackmyhealth_fitness Class Reference

Inheritance diagram for usertrackmyhealth_fitness:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **ddlParameter_SelectedIndexChanged** (object sender, EventArgs e)
- void **btnOk_Click** (object sender, EventArgs e)
- void **btnView_Click** (object sender, EventArgs e)
- void **grvHRExercise_PageIndexChanging** (object sender, GridViewPageEventArgs e)
- void **grvPedometer_PageIndexChanging** (object sender, GridViewPageEventArgs e)
- void **btnGraph2_Click** (object sender, EventArgs e)
- void **btnTable2_Click** (object sender, EventArgs e)
- void **back_Click** (object sender, ImageClickEventArgs e)
- void **next_Click** (object sender, ImageClickEventArgs e)
- void **txtpage_TextChanged** (object sender, EventArgs e)
- void **btn_back1_Click** (object sender, ImageClickEventArgs e)
- void **btn_next2_Click** (object sender, ImageClickEventArgs e)
- void **txt_page2_TextChanged** (object sender, EventArgs e)
- void **btnCancel_Click** (object sender, EventArgs e)
- void **btncancelTable_Click** (object sender, EventArgs e)
- void **lbPopup_Click** (object sender, EventArgs e)
- void **lbtnDateTime_Click** (object sender, EventArgs e)

Detailed Description

Definition at line 10 of file usertrackmyhealth_fitness.aspx.cs.

Member Function Documentation

void usertrackmyhealth_fitness.btnCancel_Click (object sender, EventArgs e) [protected]

[Cancel] click -> popup datetime graph close.

Definition at line 513 of file usertrackmyhealth_fitness.aspx.cs.

void usertrackmyhealth_fitness.btncancelTable_Click (object sender, EventArgs e) [protected]

[Cancel] click -> popup datetime table close.

Definition at line 520 of file usertrackmyhealth_fitness.aspx.cs.

void usertrackmyhealth_fitness.btnGraph2_Click (object sender, EventArgs e) [protected]

[Active tab] Active graph

Definition at line 427 of file usertrackmyhealth_fitness.aspx.cs.

void usertrackmyhealth_fitness.btnTable2_Click (object sender, EventArgs e) [protected]

[Active tab] Active table

Definition at line 435 of file usertrackmyhealth_fitness.aspx.cs.

void usertrackmyhealth_fitness.btnView_Click (object sender, EventArgs e) [protected]

[Filter] filter data with datetime selected.

Definition at line 381 of file usertrackmyhealth_fitness.aspx.cs.

void usertrackmyhealth_fitness.lbPopup_Click (object sender, EventArgs e) [protected]

[Open] click -> popup datetime table open.

Definition at line 527 of file usertrackmyhealth_fitness.aspx.cs.

void usertrackmyhealth_fitness.lbtnDateTime_Click (object sender, EventArgs e) [protected]

[Open] click -> popup datetime graph open.

Definition at line 534 of file usertrackmyhealth_fitness.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usertrackmyhealth_fitness.aspx.cs

usertrackmyhealth_fitness_settings Class Reference

Inheritance diagram for usertrackmyhealth_fitness_settings:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnEdit_Click** (object sender, EventArgs e)
- void **btnSave_Click** (object sender, EventArgs e)
- void **btnCancel_Click** (object sender, EventArgs e)
- void **ddlexercisemode_SelectedIndexChanged** (object sender, EventArgs e)

Detailed Description

Definition at line 8 of file usertrackmyhealth_fitness_settings.aspx.cs.

The documentation for this class was generated from the following file:

- ~/Source/SmartHomeCare/usertrackmyhealth_fitness_settings.aspx.cs

usertrackmyhealth_fitness_settings_custom Class Reference

Inheritance diagram for usertrackmyhealth_fitness_settings_custom:

Protected Member Functions

- void **Page_Load** (object sender, EventArgs e)
- void **btnSave_Click** (object sender, EventArgs e)
- override void **OnLoad** (EventArgs e)
